

AHMED SELIM MOHAMED

Full-Stack Developer (.NET · Angular · React)

ahmedxxalaidy1x@gmail.com | +20 102 139 9112 | [linkedin.com/in/ahmed-selim112](https://www.linkedin.com/in/ahmed-selim112) | github.com/Ahmed-Selim076

SUMMARY

Full-stack developer experienced in building complete, production-ready web applications independently — from database and API design through to responsive, component-driven frontends. Proficient across Angular, React, and ASP.NET Core, with hands-on experience in Clean Architecture, multi-tenant system design, real-time systems (SignalR), and secure JWT/OAuth authentication backed by relational database design in PostgreSQL. Shipped three full-scale solo projects spanning a multi-tenant SaaS store-builder platform, a real-time collaborative whiteboard, and a full-stack project management tool — including a full security audit and remediation on a production deployment.

TECHNICAL SKILLS

Languages: C#, TypeScript, JavaScript, SQL

Backend: ASP.NET Core, Entity Framework Core, ASP.NET Identity, SignalR, REST APIs, Clean Architecture, JWT & OAuth 2.0 (Google), FluentValidation, AutoMapper

Frontend: Angular, React, TypeScript, RxJS, TanStack Router/Query, Tailwind CSS, Radix UI

Database & Cloud: PostgreSQL, Cloudinary, Multi-Tenant Architecture

Tools & Practices: Git & GitHub, Railway, Vercel, Postman, xUnit, Agile/Iterative Development, API Security & Auditing

PROJECTS

Launchly — *Multi-Tenant SaaS Store Builder*

[Live Demo →](#)

Tech Stack: Angular 18, TypeScript, RxJS · ASP.NET Core 9, EF Core, PostgreSQL · Clean Architecture · JWT, Cloudinary

- Architected a Shopify-style multi-tenant platform (21 controllers, 87 REST endpoints, 17 domain entities) letting businesses launch a live storefront in minutes across 3 store types (E-commerce, Booking, Restaurant), each with 3 design templates — 9 fully functional storefronts total.
- Implemented complete tenant data isolation with EF Core global query filters and a custom tenant-resolution middleware, removing the need for manual tenant scoping in any service; covered with dedicated unit tests verifying cross-tenant data isolation.
- Built a Clean Architecture backend (Application / Domain / Infrastructure layers) with role-based access control (Super Admin, Tenant Admin, Customer), full audit logging, and Cloudinary-based image uploads.
- Delivered dynamic store theming, an analytics dashboard, and Google OAuth alongside standard JWT authentication.

Slate — *Real-Time Collaborative Whiteboard*

[Live Demo →](#)

Tech Stack: React 18, TypeScript, TanStack Router, Vite · ASP.NET Core 10, SignalR, PostgreSQL · JWT, Google OAuth

- Built a Miro-style collaborative whiteboard (4 controllers, 25 REST endpoints) with live multi-user drawing, sticky notes, text, and image elements on an infinite pan/zoom canvas.
- Engineered real-time sync over SignalR WebSocket hubs, broadcasting strokes, throttled live cursors, and deletions instantly to every connected client.
- Extended the platform beyond drawing with real-time multiplayer mini-games — a full chess engine with move validation and resignation handling, plus a configurable card-game module with live state synchronization.
- Designed a debounced auto-save pipeline that persists canvas state to PostgreSQL independently of the live sync layer, and server-enforced board roles (Owner/Editor/Viewer).

Nexus — *Project Management Platform (Jira/Trello-style)*

[Live Demo →](#)

Tech Stack: React, TanStack Start, Tailwind CSS · ASP.NET Core, EF Core, PostgreSQL · JWT, Google OAuth

- Developed a full-stack project management tool (6 controllers, 31 REST endpoints) with Kanban task boards, project/member management, task assignment, and threaded comments.
- Built JWT + refresh-token authentication with Google OAuth, a role-based admin panel, and a real-time notification & activity-log system tracking every task change.
- Conducted a full security audit on the deployed application and remediated critical vulnerabilities — hardcoded default admin credentials, an exposed JWT secret, and an unprotected admin-only endpoint — hardening the API against unauthorized access.

EDUCATION

B.Sc. in Computer & Systems Engineering — Benha University, Faculty of Engineering

LANGUAGES

Arabic (Native) · English (Professional Working Proficiency)
